

ADA Environmental Solutions and its equity partner, Energy Capital Partners, formed a joint venture company called ADA Carbon Solutions to build an activated carbon plant in Coshatta, Louisiana. Construction began in September 2008 and is expected to be completed by the middle of 2010. This \$350 million facility will produce between 125 and 175 million pounds of activated carbon per year to be used for controlling mercury emissions from coal-fired power plants.
