

ADA Environmental Solutions and its equity partner, Energy Capital Partners, formed a joint venture company called ADA Carbon Solutions. ADA Carbon Solutions is constructing an activated carbon processing facility at the Natchitoches Parish Port near Natchitoches, Louisiana. The purpose of this plant is to meet near term customer demand for ADA's activated carbon product. The operation will encompass a 40,000 sq ft warehouse for product storage and will be used to treat, grind and transload activated carbon into truck, rail or barge for shipment to customers. Modern air pollution control equipment will be installed to assure environmental compliance. Long term, this facility will serve as an additional storage and shipping location for ADA Carbon Solutions product from the larger activated carbon production facility in Coshatta, Louisiana.

Please see the photos below of the construction process, as the new plant begins to take shape. New photos will be added each week so all of our customers, investors and other interested parties can follow the progress of this exciting project.

May 15, 2009 – The steel for the Pipe Rack and Loadout Platform has been erected.

May 15, 2009 – Mechanical and process equipment installation continues.
